Industry:
Construction
Engineering and Land Surveying

A civil engineering and surveying services firm that serves public, commercial, and private clients.

CHALLENGES

A construction company needed a cost-effective business solution that allowed them to track employees and increase construction site safety. Employee accountability was becoming a serious issue for the company when inadequate safety checklists were being submitted. They also needed a way to enhance the timelines of each of their projects.

SOLUTION

Company climate, culture, and operations have significantly changed due to the implementation of Encore. Landmarks, alerts, and reporting features have changed the way the construction company manages their mobile contractors. Many of the original mobile devices purchased are still in use with their current contractors, making Encore the most cost-effective business tool they have for operational efficiency.

BENEFITS

Encore offers the ability to monitor employees and complete faster, more detailed digital safety checklists in one simple-to-use application. Task reports in the application make it possible to compare actual times and locations of employees versus their submitted timesheets. This valuable resource saved money when an employee submitted timesheets for a job that did not exist. Employee accountability increased as the "out of sight, out of mind" mentality was eliminated with the implementation of Encore.

WIRELESS FORMS
Removing paperwork delays saves time and money.

GPS TRACKING
Output is boosted with location reporting.

MOBILE TIMEKEEPING
Time is gained with a remote time-clock solution.
