

Industry:
Construction
Mechanical Contracting

A full service mechanical contracting company that specializes in engineering and estimation services.

CHALLENGES

A construction company needed a solution that allowed them to track employees and project timelines. They needed a way to dynamically monitor the progress of each of their construction projects to help them secure more new jobs and provide increased customer satisfaction.

SOLUTION

Encore helped the company remain more compliant, transparent, and productive by providing multiple features in a single digital solution to address their various pain points.

BENEFITS

With its Wireless Forms tool, Encore allowed the mechanical contracting firm to document OSHA compliance and safety checklists digitally, giving their employees more time to get work done on-site. Their workers could take photos documenting project progress and attach them to digital forms, allowing the office to receive digital updates about what had been completed in a given day. The software's Geofences and GPS Tracking tools also helped them verify that staff were at proper locations in the field, as well as get updates any time an employee left a job site or arrived on-site.

WIRELESS FORMS

Stay OSHA-compliant, increase safety, and reduce fines.

GPS TRACKING

Reduce downtime, improve output, and stay updated.

GEOFENCES

Track job-site activity in near real-time.
