

Data Collection

Collect dynamic data across your workforce to gain deeper insights into daily operations, identify hidden inefficiencies, and make more strategic and impactful decisions.

Obtaining data using paper forms and pen, which is then manually entered into the database for analysis, can be time consuming and expensive. Digital data collection enables organizations to obtain results in a faster and more accurate manner vs. manual information processing. Plus, digital data collection improves the quality of the data while reducing the labor burden associated with obtaining and analyzing data – throughout one's workforce!

Gathering the right data from your workforce and your customers can help you make smarter business decisions that:

- Save money.
- Increase productivity.
- Expand your customer base.
- Boost your bottom line.
- Bring peace of mind.

At Actsoft, we create software that helps increase your business's productivity, performance, and profitability by enabling you to digitally collect data from your business operations. Encore is designed to enhance your business's data collection capabilities and optimize your workforce's performance.

GPS Tracking

Gain positional data on your employees, assets, and vehicles in near-real time to identify trends and optimize workflows.

Mobile Timekeeping

Allow employees (regardless of locations) to submit timesheet information for more accurate and enhanced payroll processes.

Wireless Forms

Obtain inputs from digital forms for faster, more detailed business insights that help you increase profitability.
